## Who are we?

Interact RDT is a Customer Experience Consultancy. We are focused on equipping organization's to make the move from product-centric to customer-centric, through tailored experiences that are both memorable and personal.

Interact RDT's members are very dynamic, as is the nature of the content they produce. They are used to being put under pressure in delivering quality work of the highest standards and accept nothing less than perfection.

## Why us?

Interact RDT is a company that celebrates its people. We see our multifaceted and diverse workforce as our biggest asset and therefore encourage individuality and the culture of "be who you are". We guarantee interesting work in an interesting place, with people who are just as interesting.

We are looking for a junior JavaScript developer who is not scared of opportunities, who is willing to delve into the unknown and take the initiative to become more.

## Job Details

We are looking for a passionate developer with some experience to join us and help make the world a friendlier, better place. To do this you will need to be well versed in JavaScript development, its methodologies and associated tools. The role will primarily work on clientside development of interfaces and components as well as some backend development and testing.

If you have used some of these technologies and tools you might be exactly what we are looking for:

- HTML5 & CSS3
- Twitter Bootstrap
- D3
- Angular
- Bower
- Automated clientside integration testing tools such as Selenium, Phantomjs, ChromeDriver, Zombie.js, etc.

Experience in any of these is a definite plus:

- Dashboard Visualization
- Usability Testing
- Data processing
- Technical Documentation
- Project Requirement Analysis
- Unit, QA and integration testing

- Scaling, Load Balancing, High Availability
- DevOps(deployment and orchestration, monitoring, administration)

### Personal Skills/Attributes

- A passion for learning
- Ability to break down scary problems into less scary bits
- Capable of communicating complex ideas to others(with the help of a whiteboard of course)
- A near obsessive love for all things tech
- A deep conviction that the world needs more superheroes like you
